

FMCG Sales & Distribution Analytics – Project Documentation

Project Overview

This Power BI project analyzes FMCG sales, distribution performance, target achievement, inventory movement, and operational efficiency. The dashboard enables stakeholders to monitor sales trends, distributor performance, product movement, delivery efficiency, and business growth opportunities through interactive visualizations.

Business Objectives

- Identify high-performing territories and distributors.
- Track sales against targets.
- Monitor fast-moving and slow-moving products.
- Analyze inventory and stock shortages.
- Evaluate delivery performance and delays.
- Improve decision-making through data-driven insights.

Business Problems Addressed

1. Which territories generate the highest sales?
2. Which distributors are underperforming?
3. Which products move the fastest?
4. Which sales representatives achieve the highest targets?
5. Which regions experience delivery delays?
6. Which products face stock shortages?
7. Which months show peak demand?
8. What is the overall target achievement percentage?

KPIs Implemented

- Total Sales
- Total Quantity Sold
- Total Target Sales
- Target Achievement %
- Fast Moving Products
- Distributor Performance
- Delayed Deliveries
- Stock Availability

Dashboard Visuals

- KPI Cards for Sales, Quantity, Targets and Achievement %.
- Territory-wise Sales Analysis.
- Distributor Performance Matrix.
- Product Performance Charts.
- Monthly Sales Trend Analysis.
- Delivery Performance Monitoring.
- Heat Map for Product Movement.

Key Insights

- Sales performance varies significantly across territories.
- A small number of products contribute a major share of revenue.
- Certain distributors consistently exceed targets while others require intervention.
- Delivery delays impact customer service levels.
- Inventory monitoring helps prevent stock shortages.

Tools & Technologies

- Power BI
- SQL / MySQL
- DAX
- Data Modeling
- Data Visualization

Conclusion

The FMCG Sales & Distribution Analytics dashboard provides a comprehensive view of sales, distribution efficiency, inventory movement, and target achievement. It enables management to make informed decisions, improve operational efficiency, and maximize revenue growth.
